MAULANA HAFIZH ARIPUTRA

+6288225695707 | maulanahafizh234@gmail.com | linkedin.com/in/maulanahafizh | https://portofolio-maulanahafizh.vercel.app/
Tangerang, Indonesia

Informatics Engineering graduate from Universitas Trisakti with a focus on Full-Stack Web Development and Artificial Intelligence. Experienced in building web applications using React, Node.js, Express, Django, and MySQL, as well as developing Machine Learning and Computer Vision solutions using Python. Skilled in API development, frontend-backend integration, data processing, and AI model implementation. A collaborative, analytical, and adaptable professional with a strong interest in emerging technologies.

Pengalaman Kerja

PT ANTAM TBK - **Jakarta, Indonesia** Mar 2025 - Jun 2025

Commercial and Transformation Internship

- Collected, processed, and analyzed sales data to support team evaluation and reporting activities.
- Organized and maintained project and contract documentation in a structured manner to support project administration.
- Supported the planning, monitoring, and evaluation of corporate transformation projects.
- Documented business process workflows to support process analysis and operational improvement initiatives.
- Prepared activity reports and supporting information for departmental requirements.

PT Winnicode Garuda Indonesia - **Jakarta, Indonesia** Feb 2025 - Jul 2025

Full-Stack Developer Intern

- Developed responsive and interactive web interfaces using React based on UI/UX requirements and designs.
- Built REST APIs and managed databases using Node.js, Express, and MySQL.
- Integrated frontend and backend components through APIs to ensure efficient data exchange and application functionality.
- Used Git and GitHub for version control and collaborative software development.
- Assisted with application deployment to servers and supported system stability and performance.
- Performed debugging and testing to identify and resolve application issues.

Swissôtel Jakarta PIK Avenue - **Jakarta, Indonesia** Jun 2021 - Aug 2022

Banquet Worker

- Supported the planning and execution of various hotel events and functions.
- Prepared and arranged event venues, equipment, and operational requirements.
- Coordinated with team members to ensure smooth and well-organized event operations.
- Handled guest requests and complaints in a responsive and professional manner.
- Worked in a dynamic operational environment while maintaining attention to detail, teamwork, and service quality.

Jenjang Pendidikan

Universitas Trisakti - **Jakarta, Indonesia** Sep 2022 - Aug 2026

Bachelor of Informatics Engineering, 3.22/4.00

SMK KI HAJAR DEWANTORO - **Tangerang, Indonesia** Jul 2019 - Jun 2022

Senior High School, Computer and Network Student, 85.85/100.00

Pengalaman organisasi

Kepresidenan Mahasiswa Universitas Trisakti - **Jakarta, Indonesia** Oct 2025 - Sep 2026

Minister of Student Advocacy and Welfare

- Developed concepts and work programs for the Ministry of Student Advocacy and Welfare throughout the organizational term.
- Developed Trisakti Care, a student aspiration platform designed to facilitate structured submission and management of student concerns.
- Collected and reviewed student aspirations and welfare issues as a basis for advocacy initiatives.
- Conducted advocacy efforts with university leadership and relevant stakeholders based on collected student concerns.
- Coordinated with ministry members in planning and executing organizational programs.

Himpunan Mahasiswa Teknik Informatika Universitas Trisakti - **Jakarta, Indonesia** Sep 2025 - Jul 2026

Head of Cadre Development Division, Student Development Department

- Developed concepts and implementation strategies for organizational cadre development programs.
- Planned timelines and coordinated the execution of cadre development activities.
- Served as Project Lead for LKMM-TD Teknik Informatika, responsible for planning, coordination, and execution of the program attended by all active students of the Informatics Engineering Study Program at Universitas Trisakti.

Kepresidenan Mahasiswa Universitas Trisakti - **Jakarta, Indonesia** May 2024 - Oct 2025

Staff, Student Advocacy and Community Welfare Ministry

- Coordinated and prepared all logistical requirements as Head of Logistics Division for a 10-day community service program in a village, involving 60 participants and various programs for the local community.
- Collected and coordinated student concerns from Universitas Trisakti and the external community.
- Assisted in finding solutions and coordinating follow-up actions for various issues raised by students and community members.

Himpunan Mahasiswa Teknik Informatika Universitas Trisakti - **Jakarta, Indonesia** Aug 2024 - Aug 2025

Staff, External Affairs Department

- Developed concepts and activity plans for the HMTIF Universitas Trisakti × HUMANIS Universitas Esa Unggul comparative study program.
- Developed event concepts and coordinated speakers for the Collaborative Power Seminar.

Google Developer Student Club Trisakti University - **Jakarta, Indonesia** Oct 2023 - May 2024

Core Member

- Participated in technology-focused discussion forums and knowledge-sharing activities.
- Managed logistical requirements for the Basic Python Programming Study Jam.
- Prepared proposals, invitation letters, and accountability reports for the Study Jam Essential GSheets program.

Keterampilan, Prestasi & pengalaman lain

- **Project Implementation Computer Vision in Classroom:** (2026): A computer vision implementation project focused on object detection and object counting in a classroom environment using YOLOv8 and EfficientDet. The project involves dataset collection, labeling, preprocessing, and augmentation, followed by model training, optimization, and evaluation using mAP@50, FPS, MAE, and GFLOPs metrics to compare model performance across multiple aspects and determine the most suitable model for the intended application.
- **Project Narasi Bangsa Website:** (2026): A full-stack news portal website development project using React and Express.js. The project implements a multi-role user system with different access permissions for each user, along with CRUD (Create, Read, Update, Delete) functionality for news content management. The development process includes frontend interface design, backend and API development, and frontend-backend integration to support structured and efficient data management.
- **Project Realestate-Prediction:** (2023): This project involves developing a machine learning pipeline to predict property prices using features such as location, building area, and number of rooms. By combining robust predictive modeling with data analysis, the project aims to improve prediction accuracy and provide insights into property market trends.
- **Project Play-Golf-Prediction:** (2023): A machine learning project that predicts whether to play golf based on weather conditions such as outlook, temperature, humidity, and wind. The project combines data analysis and classification techniques to model decision-making and provide practical insights into weather-based decision patterns.
- **Project AcneInsight:** (2023): The AcneInsight project utilizes machine learning to predict acne severity levels and classify acne types from images. By leveraging the ResNet-18 architecture and Convolutional Neural Networks (CNN), the project achieves high accuracy in classifying acne severity (Normal to Level 3) and acne types (Blackhead, Nodule, Papule, Pustule, and Whitehead), providing potential support for dermatological assessment and treatment planning.
- **Project Titanic-Survival-Prediction:** (2023): The Titanic Survival Prediction project uses machine learning to predict passenger survival based on attributes such as age, gender, and passenger class. The project explores factors influencing survival rates through data analysis and predictive modeling, providing practical insights into the application of machine learning for classification tasks.
- **Project Cloth-Size-Prediction:** (2023): The Cloth Size Prediction project uses machine learning to predict suitable clothing sizes based on attributes such as height, weight, and age. The project aims to improve size recommendation accuracy, enhance customer satisfaction, and reduce product returns caused by incorrect sizing through data analysis and model optimization.
- **Project UI/UX Design of System Implementation:** ✅ (2024): Developed a user interface for the project deployment feature on a web platform, designed to simplify the creation and deployment of intelligent system projects.
- **Project UI/UX Design of Indowonder Aplication:** ✅ (2023): Designed an intuitive and visually appealing UI/UX for the Indowonder application to enhance user experience and usability. The design process followed the Design Thinking methodology to ensure the application meets users' needs and provides a seamless interaction experience.
- **Soft Skills**: Analytical Thinking, Critical Thinking, Logical Thinking, Time Management, Public Speaking, Leadership, Teamwork, Integrity, and Project Management
- **Hard Skills**: Microsoft Office, Python, JavaScript, HTML, CSS, React, Node.js, Express.js, Django, MySQL, Git, GitHub, Figma, Roboflow, Google Colab, Canva
